AI Full Stack Project – Documentation (SRS) Instructions (Individual Project)

1. Project Overview

- Project Title
- Your details
- Problem Statement
- Objective of the Project
- Applications
- SDG Mapping

2. System Description

- Overall architecture / (Frontend + Backend + AI + Database) - Diagram
- Technologies used (MERN + AI tools/libraries) – Tech Stack
- Workflow: How the system works from user input → output

3. Module Description (VERY IMPORTANT)

Explain each module clearly:

Frontend Module

- Pages, components, UI flow

Backend Module

- APIs, routes, business logic

Database Module

- Schema design, collections

AI Module

- What AI is used (API/model)
- Input → processing → output

For each module include:

- Purpose
- Functionality
- Tools/Technologies used

4. Functional Requirements

- List all features (CRUD, AI feature, search, etc.)

5. Non-Functional Requirements

- Performance
- Security
- Scalability
- Usability

6. Timeline (Your Work Plan)
Create a simple table:

- Day / Week
- Task Completed

Example:

- Day 1 → UI Design
- Day 2 → API Development
- Day 3 → AI Integration
- Day 4 → Testing

7. Work Summary (IMPORTANT)
Write clearly:

- What you implemented
- Challenges faced
- How you solved them

8. Screenshots / Output

- UI Screens
- Demo video link
- Poster link
- API responses (optional)
- AI feature results

9. Conclusion

- What you learned
- Outcome of the project
- Future improvements

10. GitHub Link

- Repository link
- Steps to run the project

Important Guidelines:

- Keep it neat and structured
- Use proper headings
- No copy-paste / plagiarism
- Your explanation should reflect your understanding

Goal: **Even as an individual, your documentation should look *industry-ready* and clearly explain your complete development process. Feel free to add more insights more than what is asked and stand unique!**

All the best!
